

PSD to HTML/CSS

Starting March 9th, 2010 Josh St. John Web Design is now offering PSD to HTML/CSS conversions. If you have your site saved as a valid .PSD file – I will turn it into a fully laid out HTML and CSS file in 24 to 48 hours turnaround time. In the near future, a separate page and payment system will be added to my portfolio to accept files and payments for this service.

Pricing Information:

The first page is a fee of \$100. Every additional page past the first page is \$50.

How This Works:

Step 1: Send a Quote Request with information on your PSD to HTML/CSS request. Be sure to note in the quote request that you're in need of PSD to HTML/CSS services.

Step 2: Using the above pricing information, an estimate will be sent to you for review. (Remember that most quotes get a response in an hour or less!)

Step 3: 50% of the total estimate is due via Check or PayPal before work begins.

Step 4: After receiving your PSD file, within 24 to 48 hours will be receive a zip file containing all of the images and html/css coding.

Step 5: The remaining 50% of payment is due.

Important Information:

Your PSD file does not have to be put together a certain way (Groups, etc). While it is good practice to do all of your PSD files this way, I am capable of figuring out your PSD files.

Testing of the HTML/CSS page will be done across multiple browsers to ensure compatibility (Including IE6).

Thank you!
